

- Isolated by Uemura and coworkers in 1995 off the Ayamaru coast of the Amami Islands from *Zoantus* species
- Strongly mitigates loss of bone mass and strength caused by ovariectomy
- Showcase utilization of numerous radical reactions for rapid access to a congested carbocyclic core
- Forges an unstable bis-amino acetal skeleton via one-pot cyclization strategy
- Offers precise control over seven vicinal centers while constructing heptacyclic skeleton

- Second total synthesis of this molecule

- For first, see https://8cf9eb7e-b5ec-48cd-9fdd-580cfdeede43.filesusr.com/ugd/31ec9c_6384ff1ae13d4f4eb699e21f89a2a487.pdf
