

ALL EYE PROTECTION IS NOT THE SAME

Many safety glasses and goggles protect against impact, but do little to protect against chemical splash. In a laboratory, splash can come from any angle (including from the person next to you—or behind you).

Safety Glasses With Vented Side Shields
PROBLEM: Chemical splash may enter from sides or through vent slats.

Safety Glasses With Unvented Side Shields
PROBLEM: Chemical splash may enter from sides.

Visorgogs®
PROBLEM: Rigid plastic lens does not seal completely against face. Chemical splash may enter from sides.

Directly Vented Cover Goggles
PROBLEM: Chemical splash may enter through the vent holes.

Indirectly Vented Cover Goggles
ANSI standard Z87.1 certified

While many safety glasses/goggles protect against impact, they do little to protect against chemical splash
